

**STRUCTURAL BLUE**

This origami butterfly is based on the morpho butterfly whose brilliant blue wings inspired an all-new color of blue designed by Lexus for the Lexus LC. Structural Blue is as fascinating of a design innovation as it is captivating. While the wings of the morpho butterfly appear blue, they actually have no color of their own. The effect is the result of microscopic details that scatter light and show only the color wavelengths of the iridescent blue that's perceived in their vibrant wings. Lexus carefully recreated the layers of nanostructures that produce this magical effect and Structural Blue came to be.
